CLAIMS

What is claimed is:

1. A method comprising:

determining a current location of a mobile station;

making a comparison of the current location to a designated location; and

based on the comparison, computing a next time to determine an updated location of the

mobile station.

10

5

2. The method of claim 1, wherein the determining, making and computing functions are carried out by a network server, and wherein determining the current location of the

mobile station comprises receiving from a location determination system an indication of the

current location of the mobile station.

15

20

3. The method of claim 1, wherein the determining, making and computing

functions are carried out by the mobile station, and wherein determining the current location of

the mobile station comprises:

sending a position determination request into a network; and

receiving from the network an indication of the current location of the mobile station.

4. The method of claim 1, wherein making the comparison comprises estimating a

distance between the current location and the designated location.

5. The method of claim 4, wherein computing the next time to determine the updated

location of the mobile station comprises estimating a time interval to travel the distance between

the current location and the designated location.

6. The method of claim 5, wherein estimating the time interval to travel the distance

between the current location and the designated location comprises using a predefined travel

time that corresponds to traveling the distance between the current location and the designated

location.

5

10

15

20

7. The method of claim 6, wherein computing the next time to determine the updated

location of the mobile station comprises calculating a percentage of the predefined travel time.

8. The method of claim 1, wherein making the comparison comprises estimating a

time interval to travel from the current location to the designated location.

9. The method of claim 8, wherein computing the next time to determine the updated

location of the mobile station comprises calculating a percentage of the time interval.

10. The method of claim 8, further comprising, if the time interval is more than a

predetermined amount, determining the updated location of the mobile station at a predetermined

time interval.

McDonnell Boehnen Hulbert & Berghoff 380 South Wacker Drive, 38nd Floor Chicago, IL 60606 (312) 913-0001

28

11. The method of claim 8, further comprising, if the time interval is less than a

predetermined amount, determining the updated location of the mobile station at a predetermined

time interval.

5 12. The method of claim 8, further comprising, if the time interval is between a first

threshold and a second threshold, determining the updated location of the mobile station at a

predetermined time interval.

13. The method of claim 8, wherein estimating the time interval comprises:

requesting the time interval from a geoserver; and

receiving the time interval from the geoserver.

14. The method of claim 13, wherein requesting the time interval from the geoserver

comprises sending information indicative of the current location and the designated location to

15 the geoserver.

10

15. The method of claim 1, wherein computing the next time to determine the updated

location of the mobile station comprises computing a time period.

20 16. The method of claim 15, further comprising determining the updated location of

the mobile station once the time period expires.

McDonnell Boehnen Hulbert & Berghoff 380 South Wacker Drive, 38nd Floor Chicago, IL 60606 (312) 913-0001

29

17. The method of claim 1, wherein computing the next time to determine the updated

location of the mobile station comprises computing a time of day.

18. The method of claim 17, further comprising determining the updated location of

5 the mobile station at the time of day.

19. The method of claim 1, further comprising repeating the steps of claim 1 until the

mobile station is located within a range of the designated location.

10 20. The method of claim 19, wherein the range is a distance.

21. The method of claim 19, wherein the range is an amount of time to travel from the

current location to the designated location.

The method of claim 1, further comprising repeating the steps of claim 1 until the

mobile station is located at the designated location.

23. The method of claim 22, further comprising once the next time is less than a

threshold, stop repeating the steps of claim 1.

20

24. The method of claim 1, further comprising sending content to the mobile station

once the mobile station is located within a range of the designated location.

25. A method comprising:

(a) determining when a mobile station is located within a range of a designated location

by:

(i) determining a current location of the mobile station, and

5

(ii) if the current location is not within the range, computing a next time to

determine an updated location of the mobile station, and at the next time,

repeating from step (i); and

(b) responsively sending content that is associated with the designated location to the

mobile station when the mobile station is located within the range of the designated location.

10

15

26. The method of claim 25, wherein computing the next time to determine the

updated location of the mobile station comprises:

estimating a travel time required for the mobile station to travel from the current location

to the designated location; and

calculating a percentage of the travel time.

27. The method of claim 26, wherein estimating the travel time required for the

mobile station to travel from the current location to the designated location comprises:

requesting the travel time from a geoserver; and

receiving the travel time from the geoserver.

20

28. The method of claim 25, wherein sending content that is associated with the

designated location to the mobile station comprises sending a short message service (SMS)

message to the mobile station.

29. The method of claim 25, wherein sending content that is associated with the

designated location to the mobile station comprises sending a wireless application protocol

(WAP) push message to the mobile station.

30. A system comprising:

a content serving element that stores content associated with a designated location and

sends the content to a mobile station when the mobile station is located within a range of the

designated location; and

a location determining element arranged to:

(a) determine when the mobile station is located within the range; and

15

20

10

5

(b) responsively inform the content serving element when the mobile station is located within the range, wherein the location determining element determines when the

mobile station is located within the range by performing a process comprising:

(i) determining a current location of the mobile station, and

(ii) if the current location is not within the range, computing a next time to

determine an updated location of the mobile station, and at the next time,

repeating from step (i).

McDonnell Boehnen Hulbert & Berghoff 380 South Wacker Drive, 38nd Floor Chicago, IL 60606 (312) 013 0001 31. The system of claim 30, wherein the location determining element computes the

next time to determine the updated location of the mobile station by:

estimating a travel time required for the mobile station to travel from the current location

to the designated location; and

calculating a percentage of the travel time.

32. The system of claim 31, wherein the location determining element estimates the

travel time by:

5

10

15

requesting the travel time from a geoserver; and

receiving the travel time from the geoserver.

33. The system of claim 30, wherein the content serving element includes a plurality

of content, where each content is associated with a respective designated location, and wherein

given content is sent to the mobile station once the mobile station is approximately located at the

respective designated location of the given content.

34. The system of claim 30, wherein the content is selected from the group consisting

of advertisements, solicitations, and coupons.

McDonnell Boehnen Hulbert & Berghoff 380 South Wacker Drive, 38nd Floor Chicago, IL 60606 (312) 913-0001
